

From 30 radio songs to one pick

The Spotify radio for the song now playing gives about 30 candidates. Four steps narrow them down to the song that plays next, plus two backups in case TIDAL can't start it.

LEGEND

Where a pick is confirmed

Narrowing step

Widths show the order of steps, not exact counts; how many songs survive depends on the song.

FILTERS

● When the filters leave nothing

They are relaxed one at a time, never all at once:

- first the 5-song artist rest is dropped
- then recent repeats are allowed
- never the artist playing now: if only that artist is left, the next source is asked

MATCHING

● Finding it on TIDAL

Each song is looked up on TIDAL by its ISRC code when known, otherwise by title and artist. A result must agree on both (at least 72%) and is checked again against your history, so a "Remastered" copy of a song you just heard is skipped too.

SETTINGS

● You can change

- `artist_cooldown`: songs before an artist returns (5)
- `avoid_repeats_days`: days before a song returns (7)
- `min_duration` / `max_duration`: 60 s / 15 min
- `allow_explicit`, `allow_seed_artist`
