

When the next song starts

TIDAL needs a moment to start a song. Pressing play 2 s before the end was too late on your Mac: TIDAL's own next song began first, then the pick cut in. Now TIDAL is held at the very end and the pick is started: nothing cut, nothing skipped, a short silence while it loads.

WHY HOLD AT THE END

● Right whatever TIDAL's speed

Pressing play early only works when the guess of TIDAL's start-up time is right. When TIDAL is slower, its own next song gets in; when it is faster, the end of the song is cut. Holding TIDAL at the very end works either way, at the cost of a short silence.

OPTIONAL

● Timed mode, gapless

handoff_mode: timed presses play early instead, by TIDAL's start-up time as measured on your Mac (the median of the last five hand-offs, so one slow start is ignored) plus 1 s. No silence when TIDAL is consistent. Handing picks to the stock app's own queue left a blank entry, so that is off.

SETTINGS

● You can change

- handoff_mode: pause (default) or timed
- pause_before_end: when to hold TIDAL (0.8 s)
- handoff_seconds / handoff_margin: timed mode (3 s / 1 s)
- measurements are kept in timing.json
